

E. Deltedesco, M. Niedrist, S. Oettl (2022). Occurrence of cherry viruses in South Tyrol (Italy) by comparing growth periods in two consecutive years. *Phytopathologia Mediterranea* 61(2): 395-404. doi: 10.36253/phyto-12807

SUPPLEMENTARY MATERIAL

Table S1. Summary of ELISA and RT-PCR test results for detection of s of (apple chlorotic leaf spot virus (ACLSV), Prunus necrotic ringspot virus (PNRSV) and prune dwarf virus (PDV) during two sampling years (2018 and 2020). + indicates positive sample, - indicates not detected, and x indicates host cultivar could not be identified.

Table S2. Direct comparisons of results (based on 72 samples) obtained by RT-PCR in spring 2018 or in spring 2020. The sums of positively tested trees per orchard and virus are shown. (Apple chlorotic leaf spot virus (ACLSV), Prunus necrotic ringspot virus (PNRSV) and prune dwarf virus (PDV). Numbers in parentheses indicate identical trees tested positive in 2018 and 2020. RNA extracted from petals was used as material for RT-PCR in both sampling seasons in spring 2018 and 2020.

Site	ACLSV		PNRSV		PDV	
	2018/2020	2018/2020	2018/2020	2018/2020	2018/2020	2018/2020
A	0/1		3/2 (1)		3/3 (2)
