

SUPPORTING INFORMATION

Table S1. Germinability rates, Chi-square test and *post-hoc* multiple comparison test results for heat treatments applied on carrot and parsley seeds. Germinability values are expressed as mean \pm standard deviation of n = 2000 seeds belonging to 5 lots for carrot and n = 800 seeds belonging to 2 lots for parsley.

Treatment	% Germinability	Chi-square value	P value	Significance	Multiple comparison test			
					Comparison	Chi-square	P value	Significance
CARROT								
n.t.	90.20 \pm 2.89	120.92	<0.00001	*****	n.t. vs dry	0.54	0.463556	ns
dry	89.5 \pm 3.61				n.t. vs water	88.35	<0.00001	*****
water	79.55 \pm 12.46				dry vs water	78.15	<0.00001	*****
PARSLEY								
n.t.	95.75 \pm 2.05	16.39	0.000275	***	n.t. vs dry	7.13	0.007559	**
dry	92.63 \pm 3.62				n.t. vs water	16.55	0.000047	****
water	90.63 \pm 3.38				dry vs water	2.08	0.148745	ns

Table S2. Germinability rates, Chi-square test and *post-hoc* multiple comparison test results for heat treatments applied on carrot and parsley Lso-free and Lso-infected seeds. Germinability values are expressed as mean \pm standard deviation of n = 6000 Lso-infected seeds belonging to 15 lots and n = 1200 Lso-free seeds belonging to 3 lots for carrot, and n = 1600 seeds belonging to 4 lots for parsley.

Lso	Treatment	% Germinability	Chi-square value	P value	Significance	Multiple comparison test
