

R. Sáray, E. Szathmáry, D. Pinczés, A. Almási, T. Deák, L. Palkovics, K. Salánki (2024). Genetic variability of grapevine Pinot gris virus (GPGV) in an organically cultivated vineyard in Hungary. *Phytopathologia Mediterranea* 63(1): 179–190. doi: 10.36253/phyto-14492

(a) Spatial distribution of the three grapevine lands represented in this study.

(b) The relative position of the grapevines examined in this study. The numbers on the right represent the rows of the grapevines. The numbering of the vines starts from the dirt road in the middle (as seen in the top row). The colour of the rectangles represent the GPGV clade classification presented in Figure 1. Yellow: clade A, green: clade B, red: clade C.

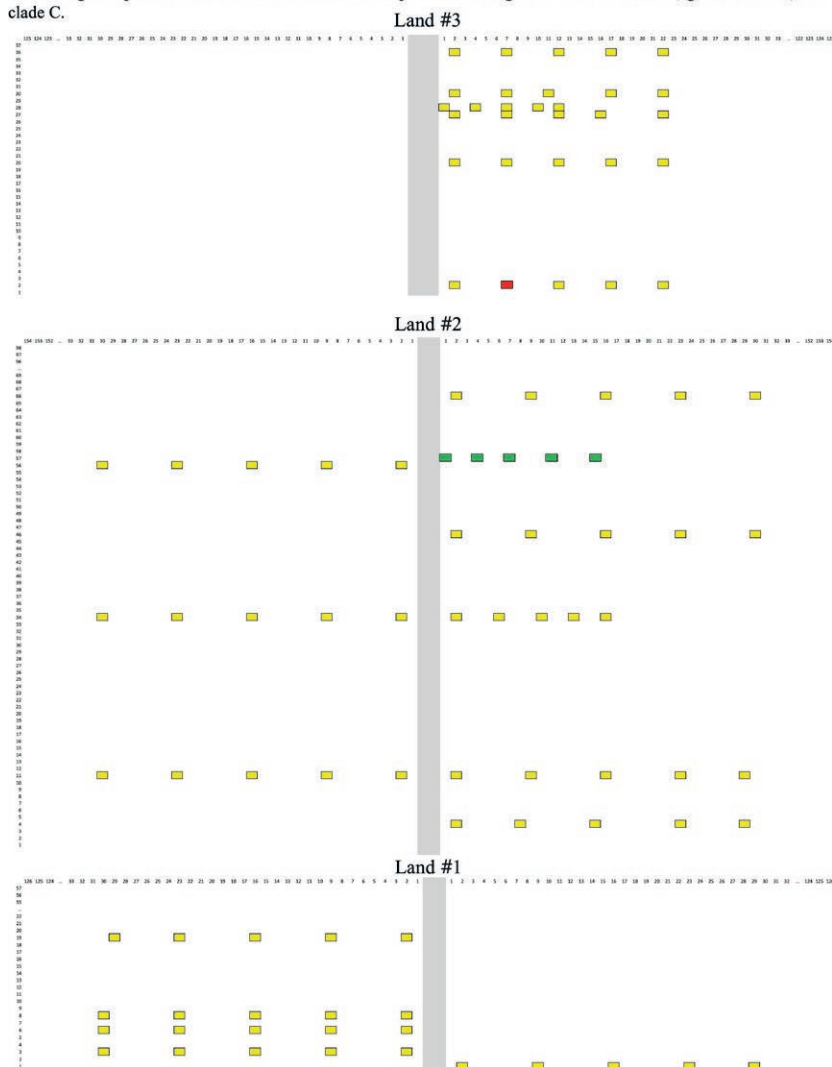

Figure S1. The spatial distribution of the sampled grapevines.
